SUMMARY

Final-year IT student with 9 months of Data Engineering part-time at AFFINA Insurance, combining real-time data platforms with user-centered React/TypeScript interfaces. Interested in designing intuitive, reliable experiences for complex enterprise products.

TECHNICAL SKILLS

- **Languages:** Python, SQL, TypeScript, JavaScript
- **Data Engineering:** ETL/ELT, CDC, batch processing, stream processing, data modeling
- **Databases:** SQL Server, PostgreSQL, Oracle, MySQL, MongoDB, Redis
- **Backend & Frontend:** FastAPI, REST API, Next.js, React, Tailwind CSS
- **AI-Assisted Development:** ChatGPT, Antigravity, AI-assisted UX ideation, prototyping, and development

WORK EXPERIENCE

Data Engineer Intern

Sep 2025 – May 2026

AFFINA Insurance

- Built an end-to-end data platform capturing real-time MySQL CDC events via Debezium and scheduled Excel ingestion, consolidating into staging tables and normalized marts with latency under 2 seconds.
- Implemented custom Contract Pre-Processing and Policy Parser to standardize schema discrepancies across 50+ contract variants, enabling consistent policy reporting across business units.
- Designed Redis-based deduplication ensuring exactly-once insertion and RabbitMQ event routing for 5 downstream consumers with at-least-once delivery semantics.

PROJECTS

Agent SQL — Multi-Source NL2SQL Analytics Platform

May 2026

github.com/phatle224/Agent_SQL

- Solved the challenge of querying fragmented data sources by enabling non-technical users to explore databases through natural-language questions instead of manually writing SQL.
- Developed a FastAPI query service to validate, sanitize, route, and execute queries across PostgreSQL, MySQL, MongoDB, SQLite, DuckDB, and imported datasets.
- Built a Next.js and TypeScript dashboard for managing database connections, submitting natural-language or manual SQL queries, and viewing query results. Implemented interactive table and chart visualizations to help users interpret query results and accelerate data analysis.

Tech: Python · FastAPI · MySQL · MongoDB · PostgreSQL · React · TypeScript

Hybrid Data Ingestion & Streaming Platform

Jun 2026

github.com/phatle224/hybrid-data-ingestion-streaming-platform

- Solved fragmented insurance data operations by unifying real-time contract changes from the sales database with offline Excel reports from partners and administrators into a centralized analytical platform.
- Built a hybrid ELT pipeline using CDC and batch ingestion into PostgreSQL, enabling timely and reliable analysis of insurance contracts, premiums, sales channels, customer profiles, and claims.
- Designed a 4-layer Medallion dbt pipeline (Staging → Intermediate → Warehouse → Mart) with 54 automated data quality tests across 5 dimension and 2 fact tables.
- Implemented cross-channel deduplication using composite business keys and ROW_NUMBER(), ensuring official online records take precedence over duplicate offline submissions; also used AI-assisted development with Codex to explore UX flows, refine interface copy, and accelerate React implementation.

Tech: Python · Debezium · Apache Kafka · dbt · PostgreSQL · React · TypeScript

EDUCATION & CERTIFICATIONS

Bachelor of Information Technology | Saigon University, Ho Chi Minh City

Sep 2022 – Expected Mar 2027

- GPA: 7.5/10 · Academic Excellence Scholarship for 3 consecutive semesters
- **Certifications:** IBM Data Engineering (Sep 2026) · IBM Data Analyst (Feb 2025)
- **Languages:** Vietnamese (Native) • English (B2 / IELTS in progress)
