EDUCATION

Saigon University

Bachelor of Information Technology

Sep 2022 – Expected Mar 2027

Ho Chi Minh City, Vietnam

- Academic Excellence Scholarship - Awarded for 3 consecutive semesters
- Achieved Highest Semester with GPA: 8.8/10

Certifications

- IBM Data Engineering (Aug 2026)
- IBM Data Analyst (Feb 2025)
- SQL Advanced — HackerRank (Dec 2025)

Languages: Vietnamese (Native), English (B2, IELTS in progress)

TECHNICAL SKILLS

Languages: Python, SQL, TypeScript

Data Pipeline & Streaming: Apache Airflow, Apache Kafka, Debezium, dbt

Databases: PostgreSQL, MySQL, MongoDB, SQL Server, SQLite, DuckDB, Redis

Backend & API: FastAPI, Next.js, React

Concepts: ELT/ETL, Medallion Architecture, Data Modeling, Batch/Stream Processing, Data Warehousing

WORK EXPERIENCE

Data Engineer Intern — AFFINA Insurance

Sep 2025 – May 2026

Ho Chi Minh City

- Built a CDC-based data ingestion pipeline capturing real-time MySQL change events via Debezium, combined with scheduled Excel ingestion into staging and normalized mart tables.
- Designed and implemented a schema standardization module unifying 50+ contract variants into a single reporting structure, eliminating inconsistencies across business units.
- Implemented Redis-based deduplication logic that reliably caught high-volume duplicate records in real time, improving downstream data accuracy.
- Set up and configured RabbitMQ event routing for the platform's messaging layer, enabling another engineering team to reliably consume real-time data without building their own infrastructure.

PROJECTS

Agent SQL — Multi-Source NL2SQL Analytics Platform

May 2026

github.com/phatle224/Agent_SQL

- Solved the challenge of querying fragmented data sources by enabling non-technical users to explore databases through natural-language questions instead of manually writing SQL.
- Developed a FastAPI query service to validate, sanitize, route, and execute queries across PostgreSQL, MySQL, MongoDB, SQLite, DuckDB, and imported datasets.
- Built a Next.js and TypeScript dashboard for managing database connections, submitting natural-language or manual SQL queries, and viewing query results; implemented interactive table and chart visualizations to accelerate data analysis.

Tech: Python, FastAPI, MySQL, MongoDB, PostgreSQL, React, TypeScript

Hybrid Data Ingestion & Streaming Platform

Jun 2026

github.com/phatle224/hybrid-data-ingestion-streaming-platform

- Built a hybrid ELT platform combining CDC (Debezium + Kafka) and batch ingestion into PostgreSQL for near real-time analytics.
- Designed a 4-layer Medallion dbt pipeline (Staging → Intermediate → Warehouse → Mart) with 54 automated data quality tests across 5 dimension and 2 fact tables.
- Implemented idempotent deduplication using composite business keys and ROW_NUMBER() window functions to eliminate duplicate records from CDC streams.
- Built observability dashboards with Prometheus and Grafana to monitor Kafka consumer lag, PostgreSQL metrics, and pipeline health.

Tech: Python, Debezium, Apache Kafka, dbt, PostgreSQL, Prometheus, Grafana
