SUMMARY

Final-year IT student with 9 months of internship experience as a Data Engineer at AFFINA Insurance. Contributed to building data ingestion and transformation pipelines using Python, Apache Airflow, Kafka, and dbt. Currently expanding skills in ELT architecture, PySpark, and data quality engineering through hands-on portfolio projects.

TECHNICAL SKILLS

Languages: Python, SQL

Data Tools: Apache Airflow, Apache Kafka, Debezium, dbt, Metabase

Databases: MySQL, PostgreSQL, MongoDB, SQL Server, Redis

Concepts: ELT/ETL, Medallion Architecture, Data Modeling, Batch/Stream Processing, Data Warehouse

WORK EXPERIENCE

Data Engineer Intern · AFFINA Insurance

Sep 2025 – May 2026

Ho Chi Minh City

- Contributed to a data platform capturing real-time MySQL change events via Debezium and scheduled Excel ingestion into staging and normalized mart tables.
- Assisted in building a schema standardization module for 50+ contract variants, enabling consistent reporting across business units.
- Implemented Redis-based deduplication logic and RabbitMQ event routing for reliable message delivery to downstream consumers.

PROJECTS

PitchFlow — Football Data Lakehouse

Aug 2026

github.com/phatle224/pitchflow-reliable-football-data-lakehouse

- Built an ELT pipeline ingesting football match data from public APIs into a Delta Lake lakehouse using PySpark.
- Applied Bronze → Silver → Gold medallion architecture: raw ingestion → DQ validation → business aggregates.
- Orchestrated daily runs with Apache Airflow; served processed stats via Streamlit dashboard for match analytics.

Tech: Python · Apache Airflow · PySpark · Delta Lake · PostgreSQL · Streamlit · Metabase

Hybrid Data Ingestion & Streaming Platform

Jun 2026

github.com/phatle224/hybrid-data-ingestion-streaming-platform

- Built a hybrid ELT platform combining CDC (Debezium + Kafka) and batch ingestion into PostgreSQL for near real-time analytics.
- Designed a 4-layer Medallion dbt pipeline (Staging → Intermediate → Warehouse → Mart) with 54 automated data quality tests across 5 dimension and 2 fact tables.
- Implemented idempotent deduplication using composite business keys and ROW_NUMBER() window functions to eliminate duplicate records from CDC streams.
- Built observability dashboards with Prometheus and Grafana to monitor Kafka consumer lag, PostgreSQL metrics, and pipeline health.

Tech: Python · Debezium · Apache Kafka · dbt · PostgreSQL · Prometheus · Grafana

EDUCATION & CERTIFICATIONS

Bachelor of Information Technology · Saigon University

Sep 2022 – Expected Mar 2027

Ho Chi Minh City | GPA: 7.5/10 | Academic Excellence Scholarship — 3 consecutive semesters

- IBM Data Engineering (Aug 2026) · IBM Data Analyst (Feb 2025) · SQL Advanced — HackerRank (Dec 2025)
- Languages: Vietnamese (Native) · English (B2, IELTS in progress)
