

LE HONG PHAT

Data Engineer

hongphatle224@gmail.com | +84 899 932 767 | Ho Chi Minh City | [Portfolio](#) | [Github](#) | [LinkedIn](#)

SUMMARY

Final-year IT student with 9 months of hands-on experience as a Data Engineer Intern at AFFINA Insurance, building real-time CDC pipelines, dbt transformations, and data platform governance. Proficient in streaming architectures, pipeline orchestration, and automated data cataloging with lineage tracking and SLO monitoring.

TECHNICAL SKILLS

- **Languages:** Python, SQL, Java
- **Data Pipeline & Orchestration:** Airflow, Kafka, Spark, Debezium, dbt, Trino, ETL/ELT
- **Databases:** PostgreSQL, Oracle, MySQL, MongoDB, ClickHouse, Redis
- **Concepts:** CDC, ETL/ELT, Data Modeling, Stream/Batch Processing, Data Lake/Warehouse

WORK EXPERIENCE

Data Engineer Intern

Sep 2025 – May 2026

AFFINA Insurance

- Built an end-to-end data platform capturing real-time MySQL CDC events via Debezium and scheduled Excel ingestion, consolidating into staging tables and normalized marts with latency under 2 seconds.
- Implemented custom Contract Pre-Processing and Policy Parser to standardize schema discrepancies across 50+ contract variants, enabling consistent policy reporting across business units.
- Designed Redis-based deduplication ensuring exactly-once insertion and RabbitMQ event routing for 5 downstream consumers with at-least-once delivery semantics.

PROJECTS

FMCG Real-Time Analytics Platform

Jun 2026

github.com/phatle224/fmcg-real-time-analytics

- Architected a dual-path (hot/cold) platform processing 1,000 POS tx/s: Kafka → ClickHouse Kafka Engine + Kafka Connect S3 Sink → MinIO/Iceberg.
- Designed ClickHouse MergeTree with Materialized Views for pre-aggregation, reducing query latency from 12s to sub-100ms on 10M+ records. Deployed Trino for federated queries across ClickHouse and Iceberg.
- Implemented Cube.js semantic layer exposing standardized business metrics to Grafana dashboards.

Tech: Python • FastAPI • Apache Kafka • ClickHouse • MinIO • Apache Iceberg • Trino • Cube.js • Grafana

Data Platform Governance & Observability Stack

Jul 2026

github.com/phatle224/data-platform-governance

- Deployed OpenMetadata catalog with automated schema ingestion from PostgreSQL, ClickHouse, and Trino. Built dbt pipeline (Staging → Mart) on Airflow with OpenLineage emitting lineage events for end-to-end data flow visualization.
- Implemented SLO alerting (Prometheus + AlertManager → Slack, 4 alert rules, <30s notification) and centralized logging using Loki and Promtail, aggregating 14+ containers into a 9-panel Grafana dashboard.

Tech: OpenMetadata • OpenLineage • Apache Airflow • dbt • Prometheus • Grafana

EDUCATION & CERTIFICATIONS

Bachelor of Information Technology | Saigon University, Ho Chi Minh City

Sep 2022 – Expected Mar 2027

- GPA: 7.4/10 | Academic Excellence Scholarship for 3 consecutive semesters
- **Certifications:** IBM Data Engineering (In Progress) • IBM Data Analyst (Feb 2025) • SQL Advanced — HackerRank (Dec 2025)
- **Languages:** Vietnamese (Native) • English (B2 / IELTS in progress)
